Art Unit: 1773

1. The following is an examiner's statement of reasons for allowance: the closest prior art Horowitz et al (USPN 3,998,602) teaches a method of metal plating polymeric substrates wherein polyfunctional monomers form a grafted polymer layer on the surface of the substrate and then metal plating is conducted onto the grafted polymer layer wherein the grafting and polymerization is initiated by a very small amount of silver ions such that metallic silver as well as silver ions are held by ionic or polar interactions with the functional groups of the grafted chains, wherein the polyfunctional monomers may be selected from a number of monomers including pyridine compounds (Abstract; Col. 2, lines 32-49; Col. 5, lines 1-23.) Horowitz et al do not teach or render obvious that fine particles having a particle size of 1nm to 300nm and capable of polarly bonding to the functional groups of the grafted chains are absorbed. It is also noted that none of the "X" references cited in the international search report teach the claimed heteroatomic group containing nitrogen or sulfur and/or the adsorbed fine particles having the claimed particle size.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
